HOUMAN ESKANDANI

Senior Backend Software Engineer | Go, Payments, Authentication & Kubernetes on GCP
eskandanihouman@gmail.com | 949-870-0432 | Irvine, CA | linkedin.com/in/houman-eskandani-347b2016b | github.com/Houmaneskandani

SUMMARY

Senior Backend Software Engineer with 5+ years building secure, multi-tenant APIs in Go, Python, and Java. At vPort: GraphQL APIs, Stripe payments, and authentication; production GKE operations on GCP; and human-gated AI agents on Anthropic Claude. Previously built PCI-DSS card issuance systems processing 1M+ card records daily for Wells Fargo, Capital One, and Citi at IDEMIA.

TECHNICAL SKILLS

Languages: Go (Golang), Python, Java, JavaScript/TypeScript (React), SQL, C/C++
Backend & APIs: GraphQL (gqlgen), REST, gRPC, Microservices, FastAPI, Gorilla Mux, Django, Stripe (Payments, Connect, webhooks)
AI & Agents: Anthropic Claude API, Claude Code CLI, LLM agent development (documentation automation, newsletter drafting)
Databases: PostgreSQL (GORM), MongoDB, MySQL
Cloud & DevOps: GCP (GKE, Cloud SQL, GCS), Kubernetes, Helm, Traefik, Docker, AWS (EC2, S3, RDS), Linux, Prometheus, CI/CD, Git
Security & Testing: OAuth 2.0, JWT, RBAC, MFA/TOTP, rate limiting, PCI-DSS, Go testing (testcontainers), JUnit, Jest, Playwright

PROFESSIONAL EXPERIENCE

Software Engineer, Backend & Platform | **vPort** Apr 2025 – Present | San Francisco, CA (Remote)

VCloud Platform: Payments, Authentication, GraphQL APIs & Kubernetes Operations

- Built Stripe payment fulfillment, refunds, chargeback handling, and the nightly Connect creator-payout job: closed a critical bypass that granted credits without payment, made crediting and payouts exactly-once under concurrent load, and added monitoring with Prometheus metrics, Slack alerts, and an operator runbook.
- Operate the production GKE cluster on GCP: deploy releases, manage the Traefik edge via Helm (Cloudflare-only origin, real client IPs, no drops on draining nodes), and run a 15-minute synthetic login probe plus nightly CronJobs that alert to Slack.
- Shipped two-factor (TOTP) login for users and admins, rate limits on sensitive routes, and zero-logout signing-key rotation; capped GraphQL parser and validation cost after a 34-token query crashed a pod.
- Added test-coverage reporting and govulncheck scanning to CI; raised backend coverage from 38% to 57% with 340+ new tests.
- Implemented multi-tenant org scoping at the database layer so no tenant can read another's data; extended the GraphQL catalog APIs (artists, sub-events, promotion codes, ownership transfer) and wrote the policy package for creator writes.
- Built a newsletter system (audience segmentation, fail-closed scheduler) and production AI agents on Anthropic Claude, orchestrated from Go: a documentation agent that drafts updates from merged pull requests and a newsletter agent with deny-by-default API keys; a human approves both.
- **Stack:** Go, gqlgen, GraphQL, Gorilla Mux, PostgreSQL (GORM), GCS, Kubernetes (GKE), Helm, Traefik, Cloudflare, Docker, Prometheus, Stripe (Payments, Connect), Anthropic Claude API, Twilio, SendGrid, React/TypeScript (admin panel).

Software Engineer II | **IDEMIA** Feb 2022 – Mar 2025 | Los Angeles, CA

Card Personalization Platform: Wells Fargo, Capital One, Citi

- Maintained and extended high-security card issuance systems processing 1M+ card records daily for top-tier U.S. financial institutions including Wells Fargo, Capital One, and Citi.
- Built secure PIN generation and mailing flows fully compliant with PCI-DSS and financial security standards, reducing compliance risk for client card programs.
- Resolved 20+ critical production incidents under strict SLAs by rapidly diagnosing logic and data defects; authored ad-hoc SQL to analyze datasets of 1M+ records for root-cause analysis.
- Implemented backend features for custom card layouts (vertical PAN, barcodes) with full backward compatibility across existing client production workflows.
- Worked in Agile delivery (daily stand-ups, client reviews); coordinated with QA and production teams.
- **Stack:** Java, SQL, Gold/CPS, Linux.

Lead Backend Software Engineer | **Spotlist Inc (Startup)** Sep 2021 – Feb 2022 | New York City, NY

- Directed backend engineering for a mobile-first expert–client marketplace; acted as interim Scrum Master, introducing Jira-based metrics that improved sprint delivery visibility.
- Mentored 5+ junior engineers through code reviews, pair programming, and system design; partnered with CEO and senior leadership to align backend architecture with the product roadmap.
- Implemented OAuth 2.0/JWT authentication with role restrictions and rate limiting; hardened APIs against brute-force and injection attacks.
- Designed and optimized PostgreSQL/MongoDB schemas with indexing and query tuning, reducing API response latency and improving platform stability under load.
- **Stack:** Python (Django), PostgreSQL, MongoDB, AWS, React Native, JavaScript, Docker, JWT.

Backend Software Engineer Intern | **Spotlist Inc (Startup)** Sep 2020 – Sep 2021 | New York City, NY

- Built Stripe payment APIs (payment intents, subscriptions, customer management) and onboarding verification flows integrating Checkr background checks and SMS/email verification.
- Developed expert search and filter APIs by location, availability, and skills; integrated Google Maps APIs for real-time expert–client distance and availability.
- Implemented JWT-based authentication and role-based access control; managed AWS-based Docker services; migrated all endpoints from HTTP to HTTPS.

PERSONAL PROJECTS

MatchYard | **iOS Sports-Partner App Built with AI Coding Agents** 2026 | TestFlight Beta

Designed and shipped an iOS app for finding sports and workout partners nearby across 20+ sports, directing Claude coding agents across 87 merged PRs while owning the specs, architecture, reviews, and testing.

- Backend: Node.js/TypeScript REST API on PostgreSQL 16 + PostGIS for radius-based discovery feeds, Redis rate limiting, JWT with refresh-token rotation, Sign in with Apple, Twilio phone OTP, and ~400 automated tests.
- AI matchmaking with the Claude API scoring player compatibility (sports overlap, skill level, distance) to rank a personalized "For You" feed; AWS Rekognition image moderation and face-liveness verification on every upload.
- Infrastructure and releases: Docker multi-stage builds on Railway (API + PostGIS + Redis), Sentry error monitoring, and a scripted fastlane + App Store Connect pipeline (15 TestFlight builds).
- **Stack:** Swift/SwiftUI, TypeScript, Node.js, Express, PostgreSQL 16 (PostGIS), Redis, Claude API, AWS Rekognition, Twilio, Docker, Railway, fastlane, Next.js.

Crypto Trading System | **Multi-Strategy Signals with Claude Trade Review** 2026

- Built a multi-strategy system for crypto perpetual futures in Python: OKX market data, multi-timeframe scanners, Claude agents that assess market regime and approve or reject each signal, Hyperliquid order execution, and a heartbeat watchdog.
- Backtested with fees, spreads, and slippage; ran 400+ paper trades and a small live pilot; a live-vs-paper report traced the gap to market-order slippage (fills about 1% worse); tested a limit-order fix on 197 real signals.

EDUCATION

B.S., Computer Science | **University of California, Riverside** Aug 2017 – Jul 2021

A.S., Computer Science | **Irvine Valley College** Aug 2015 – Jul 2017
